

Architecture Specification Data types: bit, byte, bit field, signed/unsigned integers logical, floating point, character Operations: data movement, arithmetic, logical, shift/rotate, conversion, input/output, control, and system calls # of operands: 3, 2, 1, or 0 operands Hegisters: integer, floating point, control Instruction representation as bit strings

| | Complete | |
|---|--|--|
| | Can be used for a variety of application | |
| • | Efficient | |
| | Useful in code generation | |
| • | Regular | |
| | Expected instruction should exist | |
| • | Compatible | |
| | Programs written for previous versions of machines need it | |
| • | Primitive | |
| | Basic operations | |
| • | Simple | |
| | Easy to implement | |
| • | Smaller | |
| | Implementation | |

Instructions may have 3, 2, 1, or 0 operands Number of operands may affect instruction length

Example of multiple operands

| • | Operand order is fixe | d (destination first, but need not that way) |
|---|-----------------------|--|
| | add \$s0, \$s1, \$s2 | ; Add \$s2 and \$s1 and store result in \$s0 |
| | add \$s0, \$s1 | ; Add \$s1 and \$s0 and store result in \$s0 |
| | add \$s0 | ; Add contents of a fixed location to \$s0 |
| | add | ; Add two fixed locations and store result |
| | | |
| | | |
| | | |

MIPS arithmetic Design Principle: simplicity favors regularity. Why? Of course this complicates some things... C code: A = B + C + D; E = F - A; MIPS code: add \$t0, \$s1, \$s2 add \$t0, \$t0, \$s3 sub \$s4, \$s5, \$s0 Operands must be registers, only 32 registers provided Design Principle: smaller is faster. Why? More register will slow register file down.

Conditional Execution

· A simple conditional execution

| Instruction Sequen | cing | |
|--|---|----|
| | | |
| MIPS unconditional brand j label | ch instructions: | |
| Example: f, g, and h are in reg | jisters \$s3, \$s4, and \$s5 | |
| <pre>if (i!=j) f=g-h; else f=g+h;</pre> | beq \$s4, \$s5, Labl sub \$s3, \$s4, \$s5 j exit Labl: add \$s3, \$s4, \$s5 exit: | |
| • Can you build a simple for lo | pop? | |
