Mini-project: Return max of 3 inputs

Create a function that takes 3 integers as inputs and returns the maximum.

Suggested Prerequisites

- LaunchPad Intro
- Conditional Statements
- Functions

Specification

- Write all the code in the setup() function. (Don’t use the loop() function).
- The function should have 3 int parameters and a return type of int.
- The function determines the maximum of the 3 integers, and returns the maximum integer.
- Use any numbers you like, and demonstrate your program using the Serial Monitor.
