EE 330 Fall 2021 Integrated Electronics

Lecture Instructors:

Randy Geiger 2133 Coover <u>rlgeiger@iastate.edu</u>

294-7745

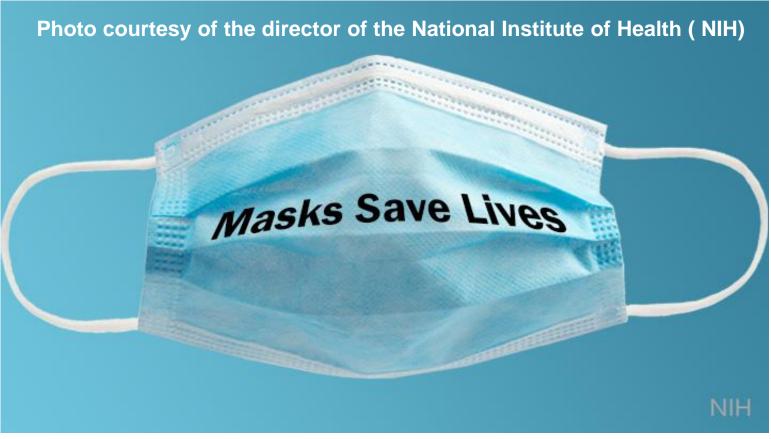

Course Web Site:

http://class.ece.iastate.edu/ee330/

Lecture: MWF 12:05 -12:55

Lab:	Sec 1	Tues 8:00 - 1	0:50 TA	\ :
	Sec 2	Tues 11:00 -	1:50 T	A:
	Sec 3	Wed 5:30 -	8:20 T	A:
	Sec 4	Fri 7:45 -	10:35 T	A:
	Sec 5	Thur 8:00 -	10:50 T	A:

Labs start this week ! HW Assignment 1 will be posted later today and is due this Friday

As a courtesy to fellow classmates, TAs, and the instructor

Wearing of masks during lectures and in the laboratories for this course would be appreciated irrespective of vaccination status

Laboratory Instructors and TAs:

- 1. Douglas Zuercher
- 2. Margaret Heaslip
- 3. Julio Torres
- 4. Nick Moser

dougz@iastate.edu mheaslip@iastate.edu jgtorres@iastate.edu nsmoser@iastate.edu

Instructor Access:

- Office Hours
 - To Be Announced
 - By appointment at other times
- Email
 - rlgeiger@iastate.edu
 - Include EE 330 in subject

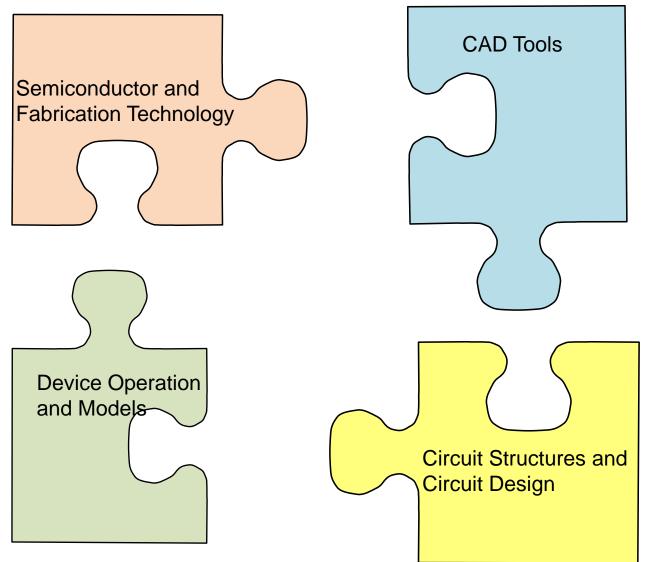

Catalog Description

E E 330. Integrated Electronics. (Same as Cpr E 330.) (3-3) Cr. 4. F.S. Prereq: 201, credit or enrollment in EE 230, Cpr E 210. Semiconductor technology for integrated circuits. Modeling of integrated devices including diodes, BJTs, and MOSFETs. Physical layout. Circuit simulation. Digital building blocks and digital circuit synthesis. Analysis and design of analog building blocks. Laboratory exercises and design projects with CAD tools and standard cells.

Electronic Circuits in Industry Today

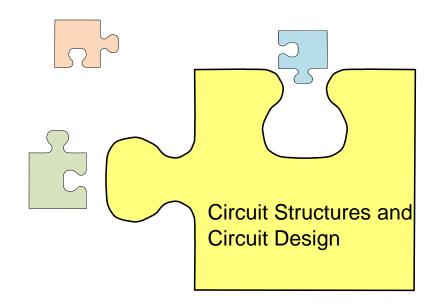

- Almost all electronic circuits are, at the most fundamental level, an interconnection of transistors and some passive components such as resistors, capacitors, and inductors
- For many years, electronic systems involved placing a large number of discrete transistors along with passive components on a printed circuit board
- Today, most electronic systems will not include <u>any</u> discrete transistors but often billions of transistors grouped together into a few clusters called integrated circuits
- In this course, emphasis will be placed on developing an understanding on how transistors operate, on how they can be combined to perform useful functions on an integrated circuit, and on designing basic analog and digital integrated circuits
- A basic understanding of semiconductor and fabrication technology and device modeling is necessary to use transistors in the design of useful integrated circuits

How Integrated Electronics will be Approached

Will initially bounce back and forth between these topics - but have faith !

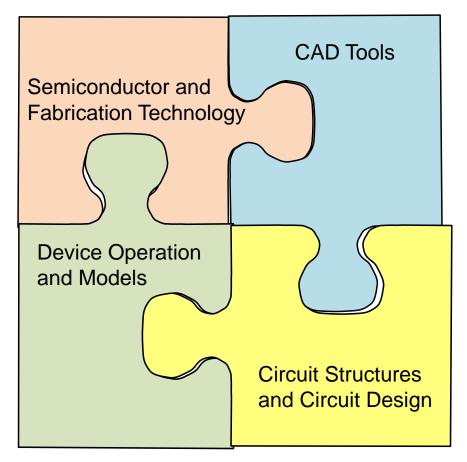

How Electronics was Approached for Decades

Coupling of electronic circuits with fabrication technology was weak and device models were simple

How Integrated Electronics will be Approached

After about four weeks, through laboratory experiments and lectures, the concepts should come together

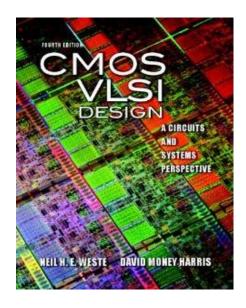

The sequencing of laboratory experiments has been intentionally structured so that on some topics, a laboratory investigation will lead a topic in the classroom and in others it will follow

Topical Coverage

- Semiconductor Processes
- **Device Models** (Diode, MOSFET, BJT, Thyristor)
- Layout
- Simulation and Verification (using commercial state of the art toolsets)
- Basic Digital Building Blocks
- Behavioral Design and Synthesis
 - Standard cells
- Basic Analog Building Blocks

Textbook:

- CMOS VLSI Design A Circuits and Systems Perspective by Weste and Harris Addison Wesley/Pearson, 2011
 - Fourth edition

Detailed Course Notes

Extensive course notes (probably over 1800 slides) will be posted

Lecture material will not follow textbook on a section-by-section basis

Grading Policy

3 Exams100 pts each1 Final100 pts.Homework100 pts.totalLab and Lab Reports100 pts.totalDesign Project100 pts.

- A letter grade will be assigned based upon the total points accumulated
- Grade breaks will be determined based upon overall performance of the class

Studying for this course:

- By focusing on the broad concepts, the details should be rather easy to grasp
- Focusing on the details rather than broad concepts will make this course very difficult
- Read textbook as a support document even when lecture material is not concentrating on specific details in the book
- Although discussing homework problems with others on occasion is not forbidden, time will be best spent solving problems individually
- The value derived from the homework problems is not the grade but rather the learning that the problems are designed to provide
- Seek help from the instructor or the TAs if help is needed on any topic
- Ask questions in class on any concepts that are not clearly understood

Equal Access Policy

Participation in all class functions and provisions for special circumstances including special needs will be in accord with ISU policy

Participation in any classes or laboratories, turning in of homework, or taking any exams is optional however grades will be assigned in accord with the described grading policy. No credit will be given for any components of the course without valid excuse if students choose to not contribute. Successful completion of ALL laboratory experiments and submission of complete laboratory reports for ALL laboratory experiments to TA by deadline established by laboratory instructor is, however, required to pass this course.

Laboratory Safety

Be aware of safety even when operating in a virtual environment !

Due Dates and Late Reports

Homework assignments will be posted on the class WEB site and turned in on Canvas

Design Project

- Design project will focus on the design of an integrated circuit
- Opportunity will exist to have the integrated circuit fabricated through MOSIS
 The MOSIS Service
- Fabricated circuit will not be back from foundry until some time after class is over
- The cost of this fabrication would be many \$ thousands if paid for privately
- The final project will be culminated with an oral presentation and a written report

www.mosis.com

From MOSIS WEB site Aug 26, 2019

Effective immediately, MOSIS continues to support ON Semi B5 0.5 micron process (formally C5) for VLSI design classes for undergraduate courses under new MOSIS University Support Program. This will be the only free fabrication technology going forward.

Obsolete or Current?

⊳ The end of Blu-ray | ZDNet

https://www.zdnet.com > article > the-end-of-blu-ray ▼

Feb 25, 2019 - Thanks to the rise of streaming, Samsung is discontinuing its Blu-**ray** and 4K Blu-**ray** player lines. That's lousy news for people who love older ...

Over to years ago, Samsung released the first commercial Bluray video disc player. Within a few years, Samsung and other Blu-ray OEMs had defeated their rival HD DVD manufacturers. They were set to dominate the video world. Then, streaming came along and everything changed. Recently, Samsung told *CNET* that, "Samsung will no longer introduce new Blu-ray or 4K Blu-ray player models in the US market."

Obsolete or Current?

Blu-ray is dead.

It's not often that an industry's leading OEM quits, but that's what Samsung has done. Samsung had 37 percent of the market, followed by Sony at 31 percent and LG at 13 percent according to market research firm NPD Group. On Amazon, Samsung had four of Amazon's 10 best-selling Blu-ray players including the most popular model.

With its demise, Blu-ray follows Laserdisc, BetaMax, and VHS VCRs into the second-hand stores. DVDs may soon follow. Ted Sarandos, Netflix's longtime head of content told Variety, even though Netflix still has three-million DVD subscribers, "We never spent one minute trying to save the DVD business."

Why? It's all because of streaming.

Graphing calculator

Computing engine

A graphing calculator is a handheld computer that is capable of plotting graphs, solving simultaneous equations, and performing other tasks with variables. Wikipedia

Calculation supported: Equation

Operation supported: Graph of a function, Computer algebra system, Programming

Purpose: Solving simultaneous equations, Plotting graphs

Application: Education, Engineering

Introduced in school level: High school, GCE Advanced Level

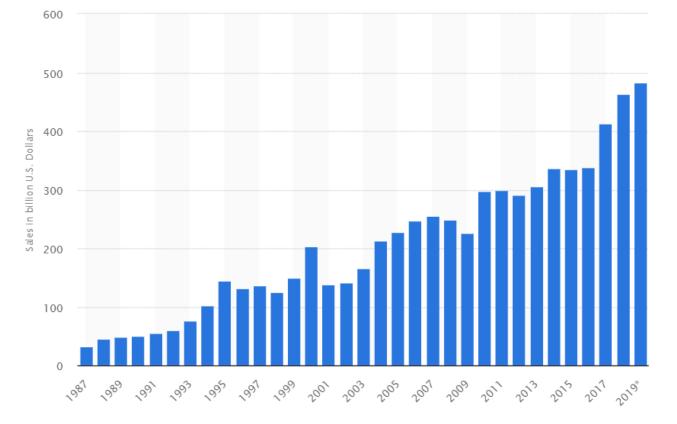

The Semiconductor Industry

(just the "chip" part of the business)

How big is it?

How does it compare to other industries?

How big is the semiconductor industry?

Projected at \$483 Billion in 2019

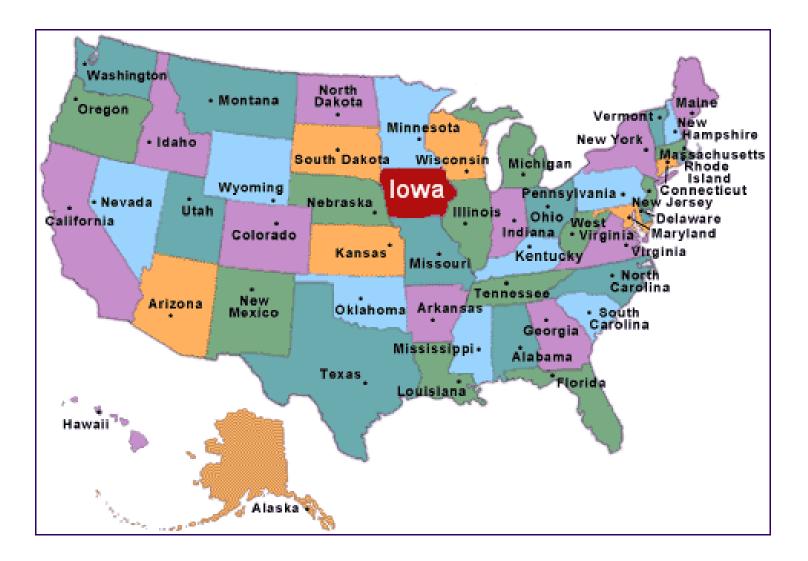

Semiconductor sales do not include the sales of the electronic systems in which they are installed and this marked is much bigger !!

The Semiconductor Industry

How big is it?

How does it compare to Iowa-Centric Commodoties?

In the United States, Iowa ranks:

First in Corn production First in Soybean production First in Egg production First in Hog production Second in Red Meat production

http://www.iowalifechanging.com/travel/iowafacts/statistics.html

Beans

Corn

Corn

Beans

Agricultural Commodities are a Major Part of the Iowa Economy

Value of Agricultural Commodities

Corn Production

Soybean Production

	Bushels (Billions)
Iowa	2.2
United States	12
World	23

	Bushels (Billions)
Iowa	0.34
United States	3.1
World	8.0

(i) Not secure | www.landuscooperative.com/grain-bids/

Based upon Jan 12, 2020 markets in Boone Iowa

Value of Agricultural Commodities

(Based upon commodity prices in Boone Iowa on Aug 17 2018)

(simplifying assumption: value constant around world)

Corn Production

Soybean Production

	Bushels (Billions)	Value (Billion Dollars)		Bushels (Millions)	Value (Billion Dollars)
Iowa	2.2	\$8.1	Iowa	340	\$3.0
United States	12	\$44	United States	3,100	\$27
World	23	\$85	World	8,000	\$70

Projected world 2019 semiconductor sales of \$483B about 312% larger than value of total corn and soybean production today!

Semiconductor sales has averaged about 300% larger than value of total corn and soybean production for much of past two decades!

The Semiconductor Industry How big is it ?

About \$470B/Year and growing

How does it compare to Iowa-Centric Commodities?

Larger than major agricultural commodities (over 3X)

The semiconductor industry is one of the largest sectors in the world economy and continues to grow

And the electronics industry which embeds the semiconductor devices is much larger

How is the semiconductor industry distributed around the world?

Why did Samsung's position change so much?

Top 10 Semiconductor Sales Leaders 2016-2019

March 11, 2019, anysilicon

IC Insights is currently updating its 2019-2023 semiconductor market forecasts that will be presented later this month in the March Update, the first monthly Update to the 500-page, 2019 edition of The McClean Report—A Complete Analysis and Forecast of the Integrated Circuit Industry (released in January 2019).

For 2019, a steep 24% drop in the memory market is forecast to pull the total semiconductor market down by 7%. With 83% of Samsung's semiconductor sales being memory devices last year, the memory market downturn is expected to drag the company's total semiconductor sales down by 20% this year. Although Intel's semiconductor sales are forecast to be relatively flat in 2019, the company is poised to regain the number 1 semiconductor supplier ranking this year (Figure 1), a position it held from 1993 through 2016.

Applications of Electronic Devices

- Communication systems
- Computation systems
- Instrumentation and control
- Signal processing
- Biomedical devices
- Automotive
- Entertainment
- Military
- Many-many more

Applications often incorporate several classical application areas Large number (billions) of devices (transistors) in many applications

Electronic circuit designers must understand system operation to provide useful electronic solutions

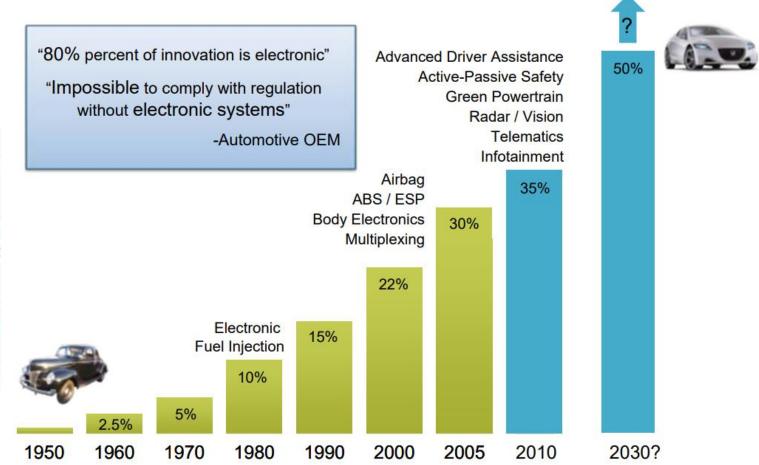

Is an automobile an electronics "gadget"?

Opportunities in the Electronics Field

- A lot has happened in the field in the past 4 decades
- Are there still opportunities?

But be realistic about the difference between what can be done and what can be done profitably

How many of you stream high definition video on smart phones?

If not, how many would like to?

Consider Television Sets and Monitors

8K UHD Television

Pixels: 7680 Horizontal and 4320 Vertical

Samsung - 55" Class - LED - Q900 Series - 4320p - Smart - 8K UHD TV with HDR

Model: QN55Q900RBFXZA SKU: 6355633

🕏 🛨 🛨 📩 🕇 4.8 (19 Reviews) 🗸 🔰 12 Expert Reviews 🗧 7 Answered Questions

Hot offer Save \$50-\$200 (

But: No 8K media or broadcast channels available in the US and none on the horizon at this time (Jan 2020)!

Consider Television Sets and Monitors

4K UHD Television

Pixels: 3840 Horizontal and 2160 Vertical

TCL - 55" Class - LED - 5 Series - 2160p - Smart - 4K UHD TV with HDR - Roku TV

Model: 558525 SKU: 6358918

(§) Price Match Guarantee

An example of electronic opportunities

Consider High Definition Television (HDTV)

Video:

Frame size: 3840 x 2160 pixels (one UHD TV frame size)

Frame rate: 120 frames/second (one HDTV frame rate)

Pixel Resolution: 12 bits each RGB plus 12 bits alpha (48 bits/pixel) (no HDTV standard)

RAW (uncompressed) video data requirements: (3840*2160)*120*(48) = 48 G bits/sec (some references show 36 G bits/sec)

8K UHD RAW (uncompressed) video data requirements: 144 G bits/sec Audio:

Sample rate: 192 K SPS (44.1 more common)

Resolution: 24 bits (16 bits or less usually adequate)

Number of Channels: 2 (Stereo)

RAW (uncompressed) audio data requirements: 192K*24*2 = 9.2 Mbits/sec

- RAW video data rate approximately 5000X the RAW audio data rate
- Are RAW video data rates too large to be practical ??

How much would it cost to download a 2-hour UHD TV "movie" using RAW audio and video on a Verizon Smart Phone today?

Verizon Data Plan Jan 2016 (for over 12G per month) \$3.5/GB (to keep reasonable bandwidth without throttling)

RAW (uncompressed) video data requirements = 48 G bits/sec

RAW (uncompressed) audio data requirements: 192K*24*2 = 9.2 Mbits/sec

Total bits: 48x60x120 Gb = 346,000 Gb

Total bytes: 48x60x120/8 GB = 43,000 GB = 43 TB

Total cost: \$150,000

- Moving audio and video data is still expensive and still challenging !
- Be careful about what you ask for because you can often get it!

What can be done to reduce these costs?

An example of electronic opportunities

Consider High Definition Television (UHDTV)

Video:

RAW (uncompressed) video data requirements: 48 G bits/sec

Audio:

RAW (uncompressed) audio data requirements: 192K*24*2 = 9.2 Mbits/sec

Compressive video coding widely used to reduce data speed and storage requirements

- UHDTV video streams used by the broadcast industry are typically between 14MB/sec and 19MB/sec (a compressive coding of about 14:1)
- But even with compression, the amount of data that must be processed and stored is very large
- Large electronic circuits required to gather, process, record, transmit, and receive data for HDTV

What does data really cost today (Aug 2021)?

Verizon 5GB shared data: from \$55 per month

Verizon's shared data plans start with a 5GB allowance plan for \$55 a month. The pric but it's worth noting that 5GB doesn't go a long way, so if you're planning on sharing v make sure you're both only using it for browsing and checking emails. This plan incluc the Verizon premium network, but no streaming service or cloud storage perks. **1-line:** \$55/mo | **2-line:** \$80/mo | **3-line:** \$105/mo

Verizon 10GB shared data: from \$65 per month

The second shared data plan is a 10GB option, which we'd recommend for most peop their plan across multiple users or devices. Again, 10GB doesn't go that far, but it's a f helping for most non-streaming tasks. This plan includes full 5G access on the Verizor but no streaming service or cloud storage perks. **1-line:** \$65/mo | **2-line:** \$90/mo | **3-line:** \$115/mo

Effective data rates: \$2/GB

Is it really unlimited?

TECHRADAR RECOMMENDS

Verizon's Play More Unlimited is Verizon's main consumer-focused postpaid plan. It sits right in the middle cost-wise but features full unlimited 5G access, priority premium network access, and a full subscription to Hulu, Disney+, and even ESPN+. It's definitely quite pricey, but you're getting a ton of great perks here as well as unlimited and reliable access to some of the best data speeds in the country.

1-line: \$80/mo | 2-line: \$140/mo | 3-line: \$165/mo

Verizon Play More Unlimited: \$80/mo for 1-line

VIEW DEAL

Yes – but ...

What about throttling?

Verizon has 3 levels of unlimited data plans. The cheapest one has the possibility of being "throttled" AT ANY TIME there is congestion on the local towers. The mid-tier has no throttling until you have used at least 22 GB in a month on a line. The highest tier has no throttling until you have used at least 75 GB in a month on a line.

How much would it cost to download a 2-hour HDTV "movie" using compressed audio and video on a Verizon Smart Phone today? Assume total signal compressed to 14MB/sec

Verizon Data Plan of Jan 2016 \$3.50/GB

Total bytes: 43,000 GB/14 = 3070 GB = 3.1 TB

Total cost: \$10,745

Moving audio and video data is still expensive and still challenging !

Data costs for cellular communications are dropping ? (Verizon data plan of April 2014 is \$15/GB from 1G to 3G increment) (Verizon data plan of Aug 2015 is \$7.50/GB from 1G to 3G increment) (Verizon data plan of Aug 2018 is \$15/GB over plan limit if not unlimited)

S70/mo You like to stream video and are always online (great for

8GB

Premium 4G LTE Data Unlimited Talk & Text Carryover Data Safety Mode Data Boost \$15/1GB Verizon Up Rewards

Challenge to Students

- Become aware of how technology operates
- Identify opportunities where electronics technology can be applied
- Ask questions about how things operate and why

Stay Safe and Stay Healthy !
