

# EE 3300

## Fall 2024

# Integrated Electronics

Lecture Instructors:

Randy Geiger

2133 Coover

[rlgeiger@iastate.edu](mailto:rlgeiger@iastate.edu)

294-7745

Course Web Site:

<http://class.ece.iastate.edu/ee330/>

Canvas:

Use primarily for turning in assignments and reports  
“Grades” generated by Canvas are unrelated to the  
course grading policy

Lecture: MWF 12:05 –12:55 Rm 1011 Coover

Lab:	Sec A	Tues	8:00 AM	- 10:50	TA:
	Sec B	Tues	11:00 AM	- 1:50	TA:
	Sec D	Fri	7:45 AM	- 10:35	TA:

**Labs start this week !**

**HW Assignment 1 has been posted and is due on Monday**

# Laboratory Instructors:

Matt Crabb

[mjcrabb@iastate.edu](mailto:mjcrabb@iastate.edu)

Logan Lee

[llee12@iastate.edu](mailto:llee12@iastate.edu)

# Instructor Access:

- Office Hours
  - Monday, Wednesday, Friday 11:00-11:50
  - By appointment at other times
- Email
  - [rlgeiger@iastate.edu](mailto:rlgeiger@iastate.edu)
  - Include **EE 3300** in subject
- Class Zoom Link

<https://iastate.zoom.us/j/93787704666?pwd=kKSFfoyTf3hyw1gsDxGC5s5JQeAkSW.1>

Passcode: **889164**

# Catalog Description

**EE 3300. Integrated Electronics.** (Same as Cpr E 3300.) (3-3) Cr. 4. F.S. *Prereq:* 2010, credit or enrollment in EE 2300, Cpr E 2100. Semiconductor technology for integrated circuits. Modeling of integrated devices including diodes, BJTs, and MOSFETs. Physical layout. Circuit simulation. Digital building blocks and digital circuit synthesis. Analysis and design of analog building blocks. Laboratory exercises and design projects with CAD tools and standard cells.

# Grading Policy

3 Exams	100 pts each
1 Final	100 pts.
Attendance	100 pts. total
Homework	100 pts. total
Lab and Lab Reports	100 pts. total
Design Project	100 pts.

- Attendance based upon in-person presence but under special individually approved circumstances zoom can be used
- A letter grade will be assigned based upon the total points accumulated
- Grade breaks will be determined based upon overall performance of the class

# Textbook:

- CMOS VLSI Design – A Circuits and Systems Perspective  
by Weste and Harris Addison Wesley/Pearson, 2011  
- Fourth edition

- Detailed Course Notes

Extensive course notes (probably over 1800 slides) will be posted

Lecture material will not follow textbook on a section-by-section basis

# Academic Misconduct

Academic misconduct will not be tolerated in this course

- Academic misconduct includes, but is not limited to, representing someone else's work as your own. Some examples of academic misconduct include turning in homework solutions that are copied from someone else, turning in source code prepared by someone else, and copying solutions from someone else on exams.
- Academic misconduct also includes but is not limited to making postings or dissemination of course materials so that the poster or others can take advantage of the work of others. Specifically precluded is posting any homework or exam problems on any forums such as Chegg or similar forums or accessing these forums to see if anyone else has posted or solved problems. Specifically precluded is also any AI-generated content such as ChatGPT or similar tools.

Those that violate the academic conduct guidelines will, at the discretion of the instructor, receive either a grade of 0 for the work where academic misconduct occurred or a grade of F for the course. A grade of F will be assigned to any student that is caught using electronic forums such as Chegg (either posting or accessing) or ChatGPT for any part of this course.

The course will follow Iowa State University's policy on academic dishonesty. Anyone suspected of academic dishonesty will be reported to the [Office of Student Conduct](#).

# Studying for this course:

- By focusing on the broad concepts, the details should be rather easy to grasp
- Focusing on the details rather than broad concepts will make this course very difficult
- Read textbook as a support document even when lecture material is not concentrating on specific details in the book
- Although discussing homework problems with others on occasion is not forbidden, time will be best spent solving problems individually
- The value derived from the homework problems is not the grade but rather the learning that the problems are designed to provide
- Seek help from the instructor or the TAs if help is needed on any topic
- Ask questions in class on any concepts that are not clearly understood

# Equal Access Policy

Participation in all class functions and provisions for special circumstances including special needs will be in accord with ISU policy

Participation in any classes or laboratories, turning in of homework, or taking any exams is optional however grades will be assigned in accord with the described grading policy. No credit will be given for any components of the course without valid excuse if students choose to not contribute. Successful completion of ALL laboratory experiments and submission of complete laboratory reports for ALL laboratory experiments to TA by deadline established by laboratory instructor is, however, required to pass this course.

# Electronic Circuits in Industry Today

- Almost all electronic circuits are, at the most fundamental level, an interconnection of transistors and some passive components such as resistors, capacitors, and inductors
- For many years, electronic systems involved placing a large number of discrete transistors along with passive components on a printed circuit board
- Today, most electronic systems will not include any discrete transistors but often billions of transistors grouped together into a few clusters called integrated circuits
- In this course, emphasis will be placed on developing an understanding on how transistors operate, on how they can be combined to perform useful functions on an integrated circuit, and on designing basic analog and digital integrated circuits
- A basic understanding of semiconductor and fabrication technology and device modeling is necessary to use transistors in the design of useful integrated circuits

# How Integrated Electronics will be Approached

Will initially bounce back and forth between these topics – but have faith !

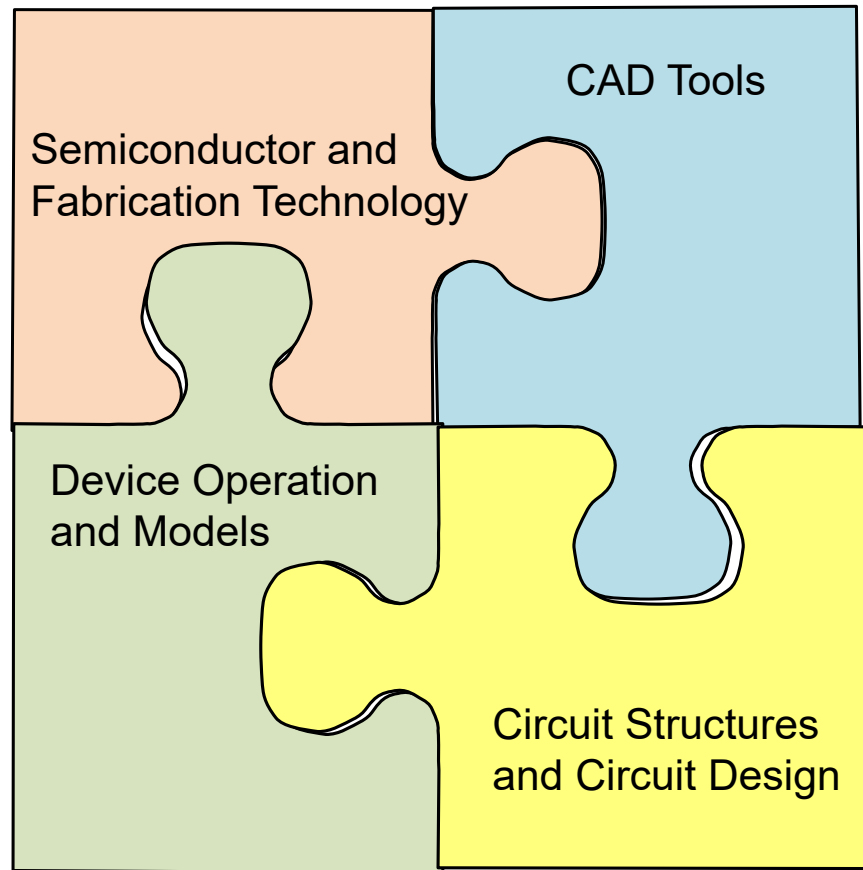

# How Electronics was Approached for Decades

Coupling of electronic circuits with fabrication technology was weak and device models were simple

# How Integrated Electronics will be Approached

After about four weeks, through laboratory experiments and lectures, the concepts should come together

The sequencing of laboratory experiments has been intentionally structured so that on some topics, a laboratory investigation will lead a topic in the classroom and in others it will follow

# Topical Coverage

- Semiconductor Processes
- Device Models (Diode, MOSFET, BJT, Thyristor)
- Layout
- Simulation and Verification (using commercial state of the art toolsets)
- Basic Digital Building Blocks
- Behavioral Design and Synthesis
  - Standard cells
- Basic Analog Building Blocks

# Laboratory Equipment

All laboratory equipment and all software used in the laboratory in this course are expected to be fully functional and operate correctly all of the time!

If for any reason it appears that there is an equipment malfunction or an error in software used in this course, bring it to the attention of your TA immediately. If for any reason the issue is not resolved by your TA, bring it to the attention of the course instructor.

# Laboratory Safety

- In the laboratory, you will be using electronic equipment that can cause serious harm or injuries, or even death if inappropriately used. However, if used in the appropriate way, the risk of harm is very low. Safety in the laboratory is critical.
- Your TA will go through a laboratory safety procedure and ask you to certify that you have participated in the laboratory safety training.
- Lab Safety guidelines are posted in all of the laboratories
- Be familiar with the appropriate operation of equipment and use equipment only for the intended purpose and in the appropriate way
- Be conscientious and careful with the equipment in the laboratory for your safety and for the safety of others in the laboratory
- Use common-sense as a guide when working in the laboratory

# Laboratory Safety

# Due Dates and Late Reports

**Homework** assignments will be posted on the class WEB site and turned in on Canvas

**Homework assignments** will usually be due at 12:05 PM on Fridays but will be accepted without penalty up until 11:59 pm on the due date. In weeks where exams are scheduled or other situations arise, the homework assignment due times will be changed.

**Laboratory** reports are due at 11:59 p.m. on the day before the next laboratory experiment is scheduled. Reports will be turned in on Canvas. The last laboratory report will be due one week after the scheduled completion of the experiment.

# Design Project

- Design project will focus on the design of an integrated circuit
- The final project will be culminated with an oral presentation and a written report

Obsolete or Current?

# Technology Revolution

## Obsolete or Current?

## Graphing calculator

Computing engine

A graphing calculator is a handheld computer that is capable of plotting graphs, solving simultaneous equations, and performing other tasks with variables.

[Wikipedia](#)

**Calculation supported:** Equation

**Operation supported:** Graph of a function, Computer algebra system, Programming

**Purpose:** Solving simultaneous equations, Plotting graphs

**Application:** Education, Engineering

**Introduced in school level:** High school, GCE Advanced Level

# Technology Revolution

- Electronics technology is the driving factor in this technology revolution
- Electronics technology will play an even larger role in the technology revolution of the next two decades !

# The Semiconductor Industry

(just the “chip” part of the business)

How big is it ?

How does it compare to other industries?

# How big is the semiconductor industry?

The global semiconductor market will grow nearly 20 per cent in 2021  
Source: WSTS

## Chip market pushes upward

# How big is the semiconductor industry?

STAMFORD, Conn., December 4, 2023

## **Gartner Forecasts Worldwide Semiconductor Revenue to Grow 17% in 2024**

- ***Semiconductor Revenue to Total \$624 Billion in 2024***
- ***Semiconductor Revenue to Decline 11% in 2023***
- ***Deployment of Workload Accelerators in Servers to Increase to More Than 20% by 2027***

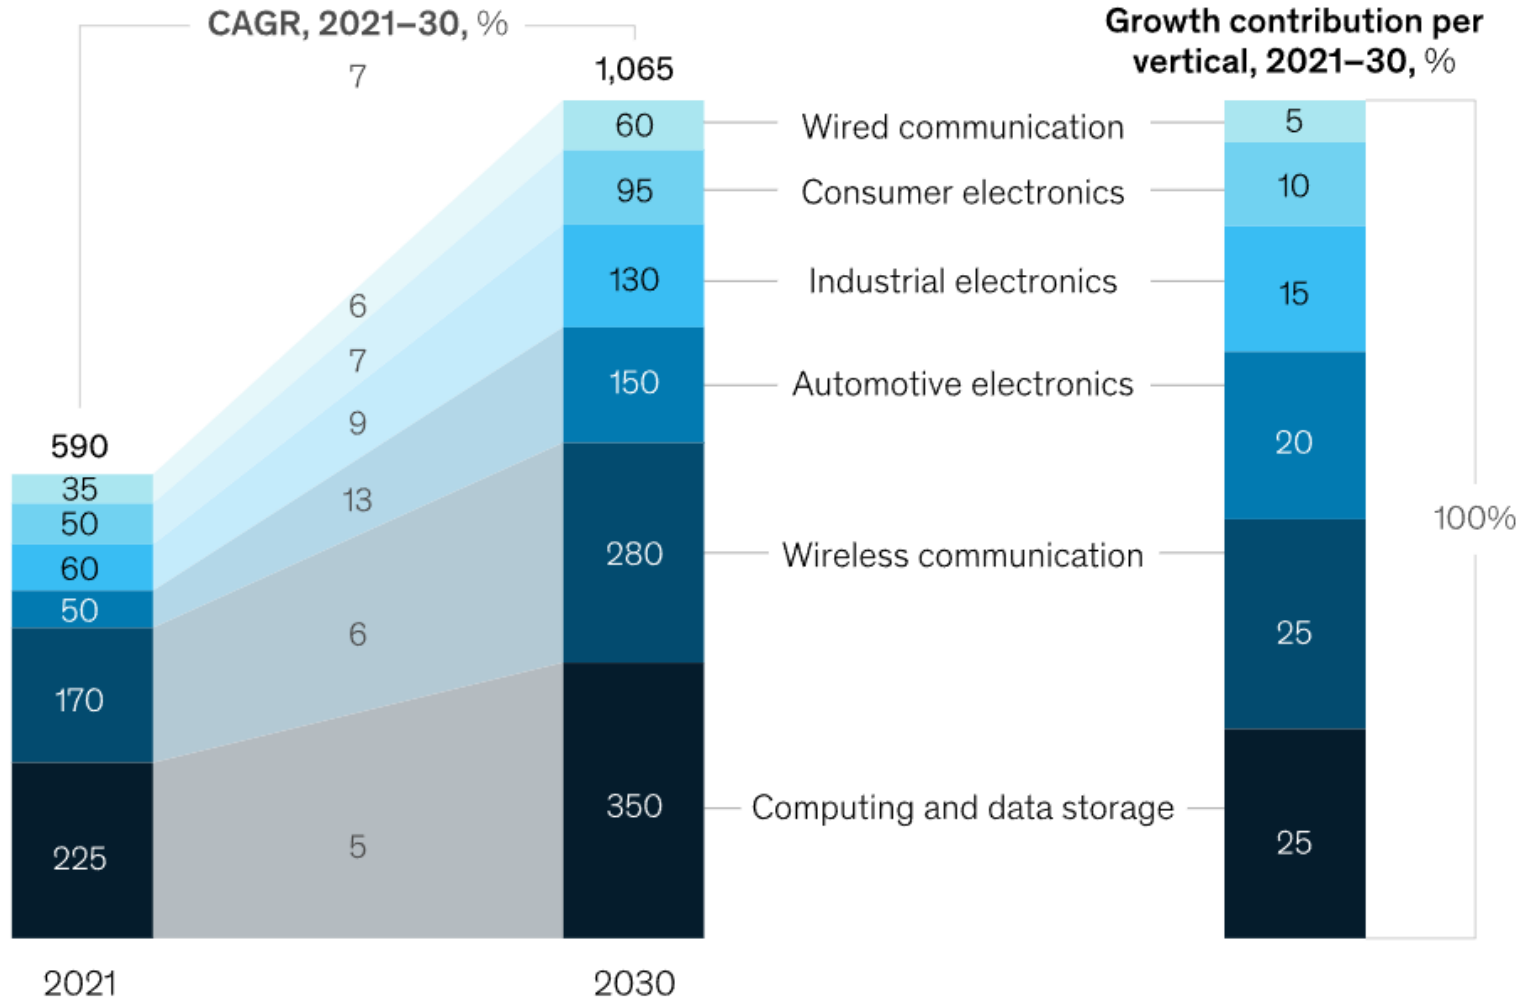

Global semiconductor revenue is projected to grow 16.8% in 2024 to total \$624 billion, according to the latest forecast from Gartner, Inc. In 2023, the market is forecast to decline 10.9% and reach \$534 billion.

- Annual sales around \$625B in 2024
- Somewhat rough in 2023
- 17% annual growth rate
- Unprecedented demand for engineers in the field

# How big is the semiconductor industry?

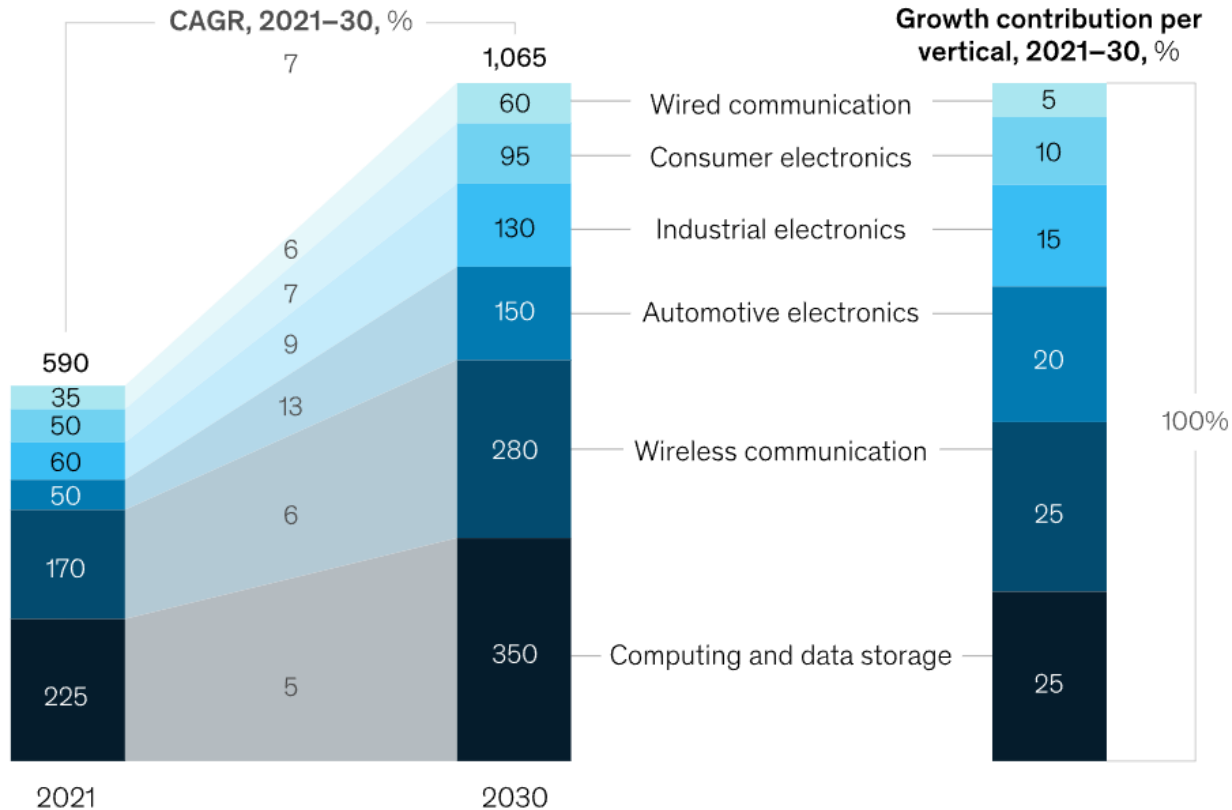

Global semiconductor market value by vertical, indicative, \$ billion

McKinsey  
& Company

# What is driving the growth?

Global semiconductor market value by vertical, indicative, \$ billion

- Automotive
- Wireless Communications
- Computing and Data Storage

# The Semiconductor Industry

How big is it ?

How does it compare to Iowa-Centric Commodities?

# Iowa-Centric Commodities

# Iowa-Centric Commodities

## **In the United States, Iowa ranks:**

First in Corn production

Second in Soybean production

First in Egg production

First in Hog production (nearly 3x 2<sup>nd</sup> rank)

First in Red Meat production (2020)

Updated August 2023

# Iowa-Centric Commodities

Corn

Beans

# Iowa-Centric Commodities

**Corn**

**Beans**

Agricultural Commodities are a Major Part of the Iowa Economy

# Value of Agricultural Commodities

## Corn Production

	Bushels (Billions)
Iowa	<b>2.2</b>
United States	<b>12</b>
World	<b>23</b>

## Soybean Production

	Bushels (Billions)
Iowa	<b>0.34</b>
United States	<b>3.1</b>
World	<b>8.0</b>

Not secure | [www.landuscooperative.com/grain-bids/](http://www.landuscooperative.com/grain-bids/)

Based upon Aug 24, 2024 markets in Boone Iowa

Corn

Soybeans

Aug 2024 delivery

3.73

9.63

# Value of Agricultural Commodities

(Based upon commodity prices in Boone Iowa on Aug 25, 2024)

(simplifying assumption: value constant around world)

## Corn Production

	Bushels (Billions)	Value (Billion Dollars)
Iowa	<b>2.2</b>	<b>\$8.2</b>
United States	<b>12</b>	<b>\$45</b>
World	<b>23</b>	<b>\$79</b>

## Soybean Production

	Bushels (Millions)	Value (Billion Dollars)
Iowa	<b>340</b>	<b>\$3.3</b>
United States	<b>3,100</b>	<b>\$30</b>
World	<b>8,000</b>	<b>\$77</b>

Projected world 2024 semiconductor sales of \$611B about 400% larger than value of total corn and soybean production today!

Semiconductor sales has averaged about 300% larger than value of total corn and soybean production for much of past two decades!

# The Semiconductor Industry

How big is it ?

About \$610B/Year and expected to exceed \$1T/Year by 2030

How does it compare to Iowa-Centric Commodities?

Larger than major agricultural commodities (almost 4X)

**The semiconductor industry is one of the largest sectors in the world economy and continues to grow**

**And the electronics industry which embeds the semiconductor devices is much larger**

# The Key Players

Rank	Company	Revenue	Net Income	Market Cap	Location
In \$Billions					
1	Samsung	202	15	275	S. Korea
2	Nvidia	80	43	3300	USA
3	TSMC *	72	28	930	Taiwan
4	Intel	55	4	130	USA
5	Broadcom	43	10	840	USA
6	Qualcomm	36	8	250	USA
7	SK Hynix	29	3.5	29	S. Korea
8	ASML *	28	8	420	Netherlands
9	Applied Materials *	27	7	205	USA
10	AMD	23	1.1	250	USA
11	Micron	21			USA
12	ASE *	17			Taiwan
13	Infineon	16			Germany
14	Texas Instr	16			USA
15	Media Tek	16			Taiwan
16	STMicro	15			Switzerland
17	Lam Res *	14			USA
18	NXP	13			Netherlands
19	Tokyo Elec *	13			Japan
20	Analog Devices	10			USA

Rank 1-10 From: Invesotpedia Updated July 31, 2024

\* Not semiconductor sales

Note: Sales of Nvidia alone exceeds value of all corn and beans produced in the US

Note: Society has a monstrous appetite for electronic devices and gadgets

# Applications of Electronic Devices

- Artificial Intelligence
- Communication systems
- Computation systems
- Instrumentation and control
- Signal processing
- Biomedical devices
- Automotive
- Entertainment
- Military
- Many-many more

Applications often incorporate several classical application areas

Large number (billions) of devices (transistors) in many applications

**Electronic circuit designers must understand system operation to provide useful electronic solutions**

Is an automobile an electronics “gadget”?

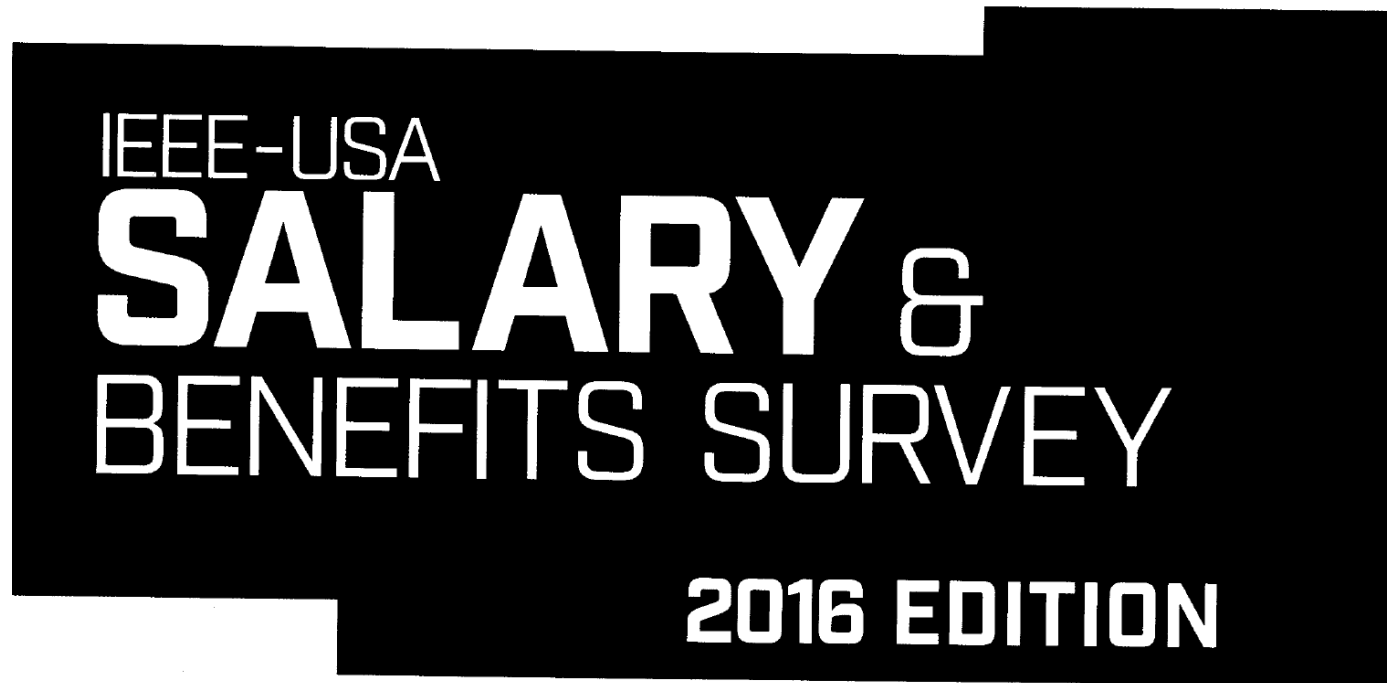

# Automotive Electronic Content Growth

# Rewards in the Electronics Field

Can engineers working in the semiconductor electronics field make a good living?

# Opportunities in the Electronics Field

- A lot has happened in the field in the past 4 decades
- Are there still opportunities?

But be realistic about the difference between what can be done and what can be done profitably

How many of you stream high definition video on smart phones?

If not, how many would like to?

# Consider Television Sets and Monitors

8K UHD Television

Pixels: 7680 Horizontal and 4320 Vertical

But: No 8K broadcast channels available in the US and none on the horizon at this time (Aug 2024) and little 8K media available !

# Consider Television Sets and Monitors

4K UHD Television

Pixels: 3840 Horizontal and 2160 Vertical

Best Buy Jan 2022

# An example of electronic opportunities

Consider High Definition Television (HDTV)

## Video:

Frame size: 3840 x 2160 pixels (one UHD TV frame size)

Frame rate: 120 frames/second (one HDTV frame rate)

Pixel Resolution: 12 bits each RGB plus 12 bits alpha (48 bits/pixel) (no HDTV standard)

RAW (uncompressed) video data requirements:  $(3840 \times 2160) \times 120 \times (48) = 48 \text{ G bits/sec}$   
(some references show 36 G bits/sec)

8K UHD RAW (uncompressed) video data requirements: 144 G bits/sec

## Audio:

Sample rate: 192 K SPS (44.1 more common)

Resolution: 24 bits (16 bits or less usually adequate)

Number of Channels: 2 (Stereo)

RAW (uncompressed) audio data requirements:  $192\text{K} \times 24 \times 2 = 9.2 \text{ Mbits/sec}$

- RAW video data rate approximately 5000X the RAW audio data rate
- Are RAW video data rates too large to be practical ??

## What does data really cost today (Aug 2021)?

### Verizon 5GB shared data: **from \$55 per month**

Verizon's shared data plans start with a 5GB allowance plan for \$55 a month. The price is \$55 a month, but it's worth noting that 5GB doesn't go a long way, so if you're planning on sharing a plan, make sure you're both only using it for browsing and checking emails. This plan includes the Verizon premium network, but no streaming service or cloud storage perks.

**1-line:** \$55/mo | **2-line:** \$80/mo | **3-line:** \$105/mo

### Verizon 10GB shared data: **from \$65 per month**

The second shared data plan is a 10GB option, which we'd recommend for most people sharing their plan across multiple users or devices. Again, 10GB doesn't go that far, but it's a helpful amount for most non-streaming tasks. This plan includes full 5G access on the Verizon network, but no streaming service or cloud storage perks.

**1-line:** \$65/mo | **2-line:** \$90/mo | **3-line:** \$115/mo

**Effective data rates: \$2/GB**

# How much would it cost to download a 2-hour 4K UHD TV “movie” using RAW audio and video on a Verizon Smart Phone today?

Assume Data Cost us \$2/GB

(to keep reasonable bandwidth without throttling)

RAW (uncompressed) video data requirements = 48 G bits/sec

RAW (uncompressed) audio data requirements:  $192K \cdot 24 \cdot 2 = 9.2$  Mbits/sec

Total bits:  $48 \times 60 \times 120$  Gb = 346,000 Gb

Total bytes:  $48 \times 60 \times 120 / 8$  GB = 43,000 GB = 43 TB

Total cost: \$86,000

- Moving audio and video data is still expensive and still challenging !
- Be careful about what you ask for because you can often get it!

## What can be done to reduce these costs?

# An example of electronic opportunities ?

Consider High Definition Television (HDTV) instead of UHD

## Video:

( reduced to 24 frames/sec 32 bits/pixel)

RAW (uncompressed) video data requirements:  $(1920 \times 1080) \times 24 \times (32) = 1.59 \text{ G bits/sec}$

## Audio:

RAW (uncompressed) audio data requirements:  $192\text{K} \times 24 \times 2 = 9.2 \text{ Mbits/sec}$

Compressive video coding widely used to reduce data speed and storage requirements

- HDTV video streams used by the broadcast industry are typically between 14MB/sec and 19MB/sec (a compressive coding of about 14:1)
- But even with compression, the amount of data that must be processed and stored is very large
- Large electronic circuits required to gather, process, record, transmit, and receive data for HDTV

# An example of electronic opportunities ?

Consider High Definition Television (HDTV) instead of UHD

## Video:

RAW (uncompressed) video data requirements:  $(1920 \times 1080) \times 24 \times (32) = 1.59 \text{ G bits/sec}$

## Audio:

RAW (uncompressed) audio data requirements:  $192\text{K} \times 24 \times 2 = 9.2 \text{ Mbits/sec}$

Compressive video coding widely used to reduce data speed and storage requirements

Cost for HDTV movie with compression @ \$2/GB?

$$\text{Bytes} = 14 \frac{\text{MB}}{\text{sec}} \times 60 \frac{\text{sec}}{\text{min}} \times 120 \text{ min} = 101 \text{ GB}$$

Total cost for two-hour HDTV movie about \$200

# Challenge to Students

- Become aware of how technology operates
- Identify opportunities where electronics technology can be applied
- Ask questions about how things operate and why

Stay Safe and Stay Healthy !
